Borealis Diamond

The Borealis Diamonds are without question the finest production diamond kite in the world. Strutted with Sky Shark tubular wrapped carbon, boasting scalloped edges, and bead-and-knock style fastening, these tight sails will fly on a whisper of wind. Both beginners and masters will be pleased at the compact packaging, light weight and ease of assembly. Superb at catching thermals these high angle fliers also sport some of the finest contemporary graphics on a kite to date.

The 7.5 Parafoil has often been used to tow kayaks and canoes for simple down-wind traction. A nice balance between compact storage and moderate pull, the P-7.5 is also a good choice for a small pilot kite or to lift multiple windsocks and small line devices. Premier has made this kite for over 30 years and it has all the elements of a true kite classic - easy to fly, durable and flies with a nice pull in a wide variety of winds.

Parafoil 60

Our largest and most powerful Parafoil, the P-60 excels at lifting almost any line accessory you can rig up. Beautifully crafted and skillfully reinforced, this powerful kite should not be taken lightly - remember, take proper precautions when flying any large kite!

13' & 21' Skeletons

No bones about it - spectacular, head-turning and available in two sizes, the Skeleton kite is one of the most stunning aerial wonders Premier has made to date. Designed by master kite designer Daryl Yeh, this "full body" kite is easy to fly in winds from 6 to 17 mph. But when you get them in a breezy "sweet spot" of about 7 to 8 mph their hips sway in the sky in a delightful dance!

Juergen Ebbinghaus

Ebbinghaus's fish are a hands-down favorite with expert kite fliers all over the world. Why? Unmatched stability, simple operation, manageable line pull and finally, the ability to fly a giant figure kite easily and reliably without a pilot kite - what else is there? What's incredible about this platform is that the larger the version, the easier it is to fly.

The Premier Difference

For over 30 years Premier Kites has focused on one thing - making high quality fabric kites that fly great. Many consumers think making a good kite is easy, like simply molding a plastic toy or making a T-shirt. However, making a good kite is extremely difficult. A kite must be light, a kite must be durable, a kite must be able to fly in a wide wind range and a kite must look great in the air. Because kites are our passion, we understand these challenges and work with the finest materials, the best designers and the most conscientious kite factory in the world. Finally, our kites designs are thoroughly tested in different winds to the highest flight standards.

Quality People
Quality Design
Quality Craftsmanship
Quality Materials

The head of product development, Val never settles for anything but the best. With numerous kite building awards from the Smithsonian, local kite events and the AKA Nationals, Val has a passion for kites and was classically trained in kite building by the late Paul E. Garber of the Smithsonian Institute.

"No other kite products in the marketplace beat the look of our appliqué kites. This "old school" kite craft of back-cut appliqué technique achieves an intensity and level of splendor unmatched by any sort of cheaper printing methods. It is an expertise Premier has perfected and dominated in the industry for over 30 years. Most kites look good in a catalog or on the web. But when you look up at the sky, a Premier appliqué kite will broadcast its beauty far above the rest."

Susan, the head of the creative department, believes that children's art should be open-ended and inspire a child's imagination. She believes, as well as the rest of Premier, that our mission is to offer a huge diversity of themes for children to encourage a child's imagination as well as a child's sense of individuality. She has Fine Arts degree in communication art & design with a focus on illustration for children.

"I enjoyed my childhood. I think it is in part because of a vivid imagination that I was encouraged to use. Perhaps I haven't quite outgrown that part of my childhood. Some of my designs feel like they've come straight from my childhood imagination. All of the designs, whether by me or one of the many talented people we have or have had in the art department, reflects what we like best about childhood."

Benefits of an Appliqué Kite

Appliqué kites are slightly different than what people typically understand about the appliqué process. The term appliqué comes from the French word for apply. Quilters use the appliqué technique often, or you might appliqué a patch onto your favorite blue jeans. However our kites are “back cut appliqué”.

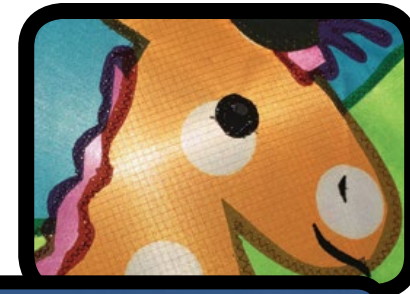

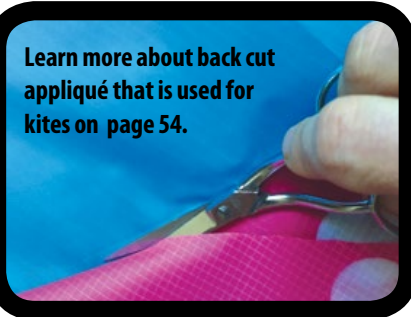

Why are our kites special?

Our kites have been built by the same factory who have only built kites for Premier for the past thirty years. We sew our kites out of high quality rip-stop and taffeta fabrics that are strong, light and fly great. We only use proven no-nonsense platforms that are stable and easy to fly for anyone. Of course plastic kites are cheaper however we love to promote kites that last a long time and give our customers a great experience year after year.

Premier employs skilled craftsmen who are experts at the back cut appliqué process.

Learn more about back cut appliqué that is used for kites on page 54.

We have many custom, printed fabrics that we use with solid colors to create unique and vibrant designs.

What about printed kites?

Are printed kites so bad?

Of course not! With recent improvements in sublimation techniques, Premier feels confident offering excellent printed kites. Quality fabric printing allows for fine detailing like the puff of smoke from a dragon's nose and subtle 3-D color shading on popular themes. Our graphic's department is quite gifted with color, contrast and detailed compositions. Through their skill and expertise they deliver amazing results on our printed kites.

Benefit of an Appliqué Kite

Only through the joining of separate well-saturated dyed panels can you achieve the spectacular back lit color intensity on a fabric kite.

Kites need to look their best flying in the sky!

A well designed kite, no matter how it is made, should look good with the sun shining on it or with the sun shining from behind it. When the sun shines from behind a kite, we kite enthusiasts say that the kite is “back lit”. Some people also call this a “stained glass effect”. Premier is the number one back-light kite specialist in the world. We understand that the most inspiring beauty for any kite is its ability to use the sun’s rays to shine through the fabric and brilliantly illuminate art in a way unique to any other form of toy or flying object.

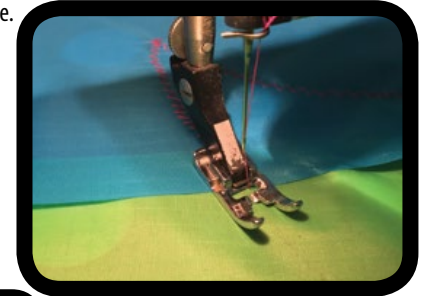

Whether designing stained glass or an appliqué kite, one has to understand the materials to create great art. Our factory goes through numerous steps for each appliqué design; each color panel on the design is carefully sewn together and then painstakingly back-cut and trimmed on the rear of the kite. The final product results in a single-surface tapestry of color that the sun and sky can beautifully illuminate from behind.

The “old school” kite craft of back-cut appliqué technique achieves an intensity unmatched by any other method. It is a technique master kite makers around the world understand and appreciate. It is an expertise Premier has perfected and dominated in the industry for over 30 years.

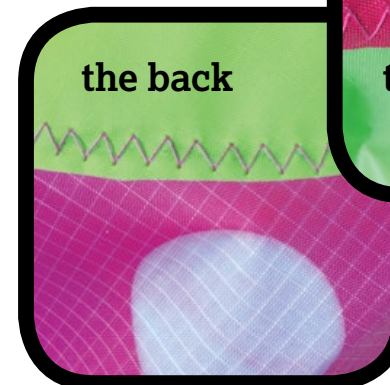

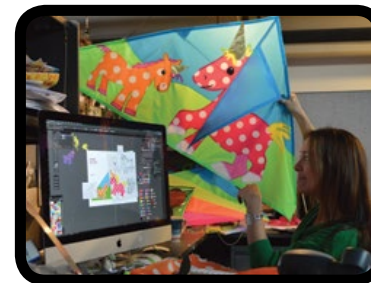

How is back-cutting done?

Here, Susan tries her best to show the back-cut appliqué technique.
