

# Hanging Pineapple assembly instructions

sku #23063

**Note:**  
When installing the final Gore in the Top disk the right edge should go under the previously installed gore, but the left edge will overlap the first gore that was installed. (Diagram E)

## Step 1

Remove Gore Panels from package and unfold (Diagram A). Ensure that the wider part of the Gore Panels are towards the bottom.

## Step 2

Ensure the Main Rotating Assembly is upright with the Hanging Clip on the top. Wrap the leaves around the top disk and secure the velcro. Align the small opening with the holes around the top disk. (Diagram A).

## Step 3

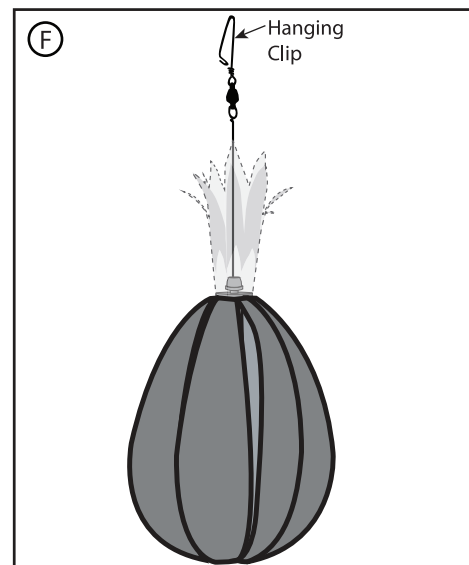

While holding the leaves in place, install one panel by inserting the top gore strut into the opening in the leaves and into the top disk. (Diagram B).

## Step 4

Then complete the installation of the first panel by inserting the bottom gore strut into the corresponding opening in the bottom disk. (Diagram C).

## Step 5

See Diagram D for how it should look at this point. Now the remaining gores can be installed. Going in a clockwise rotation around the disk insert the top gore strut, aligning it with the opening in the leaves, then insert the bottom gore strut into the corresponding hole. Repeat for each of the remaining gores. See Diagram E for important note.

**PLEASE NOTE:** Although your Hanging Pineapple is constructed with UV resistant SunTex™ fabric, it is recommended that you take it inside during storms and harsh weather to preserve its durability.
