5+

### get ready:

- Make sure the leading edge struts extend down to the end of the sleeves.
- Insert the cross strut into pockets.
- Turn you kite to the front and locate the keel. Attach the flying line to the bridle loop on the front of the keel.

### to fly:

Have a friend stand about 75 feet downwind from you and hold the kite with its nose pointed towards the sky. As the wind catches the kite, signal your friend to release it while you steadily pull in line until the kite is aloft. As the kite flies upward, slowly release more line.
